Sep 07, 2021 · Dog leg anatomy. First, you might have a basic idea of the different bones of the forelimb and hindlimb of a dog. Now I will provide you the few information on the other bones of dog leg anatomy with their unique features. The muscles of the back can be arranged into 3 categories based on their location: superficial and intermediate back muscles which develop elsewhere and are therefore classed as extrinsic muscles. The intrinsic muscles are named as such because their embryological development begins in the back, opposed to the superficial and intermediate back muscles which develop elsewhere and are therefore classed as extrinsic muscles.
