Principles of Marketing Engineering, 2nd Edition - Gary L. Lilien - 2013

The 21st century business environment demands more analysis and rigor in marketing decision making. Increasingly, marketing decision making resembles design engineering-putting together concepts, data, analyses, and simulations to learn about the marketplace and to design effective marketing plans. While many view traditional marketing as art and some view it as science, the new marketing increasingly looks like engineering (that is, combining art and science to solve specific problems). Marketing Engineering is the systematic approach to harness data and knowledge to drive effective marketing decision making and implementation through a technology-enabled and model-supported decision process. (For more information on Excel-based models that support these concepts, visit DecisionPro.biz.) We have designed this book primarily for the business school student or marketing manager, who, with minimal background and technical training, must understand and employ the basic tools and models associated with Marketing Engineering. We offer an accessible overview of the most widely used marketing engineering concepts and tools and show how they drive the collection of the right data and information to perform the right analyses to make better marketing plans, better product designs, and better marketing decisions. What's New In the 2nd Edition While much has changed in the nearly five years since the first edition of Principles of Marketing Engineering was published, much has remained the same. Hence, we have not changed the basic structure or contents of the book. We have, however Updated the examples and references. Added new content on customer lifetime value and customer valuation methods. Added several new pricing models. Added new material on "reverse perceptual mapping" to describe some exciting enhancements to our Marketing Engineering for Excel software. Provided some new perspectives on the future of Marketing Engineering. Provided better alignment between the content of the text and both the software and cases available with Marketing Engineering for Excel 2.0.

considered a science or an art. In addition to **Principles of Marketing** - Adrian Palmer - 2000 This book provides and introduction to the principles of marketing, beginning from the underlying theoretical bases which are often borrowed from the disciplines of economics, sociology, and psychology. Practical application of theory is provided through case studies and vignettes. This book tries not to present prescriptive solutions to marketing problems, but encourages debate about causes and effects. Underlying much of the discussion in this book is the question of whether marketing should be considered a science or an art. In addition to chapters covering the traditional elements of the marketing mix, the book provides insights into issues of contemporary concern in marketing. A chapter is devoted to discussion of the social responsibility of marketing. The growing importance of direct marketing and the role of electronic commerce is reflected in a separate chapter. The role of information management is emphasized throughout the book. There is a separate chapter on the marketing of services, although throughout the text an attempt has been made to provide services examples, which reflect their relative importance in western economics. Practical applications of theory highlight shortcomings of established frameworks for the study of marketing, and the reader is encouraged to formulate alternative frameworks. Although the book has necessarily been divided into a number of chapter it recognizes that in the real world marketing cannot be neatly compartmentalized in this way. In an attempt to offer a holistic vision, each chapter closes with a summary of how that chapter relates to other chapters. Vignettes and case studies provide integrative perspectives. To encourage further study each chapter contains suggestions for further reading and a selection of useful websites.

All preview cases, marketing insights and end of chapter cases are revised or completely changed to embrace the growth in e-commerce. In addition, recognising Europe's internationalism and the growth of globalisation, examples and cases are drawn, not from Europe alone, but from the US, Japan, South-East Asia and Africa. This is suitable for any undergraduate or postgraduate undertaking an introductory course in marketing.
