You'll start by exploring new PHP 8 features in the area of object-oriented programming (OOP), followed by enhancements at the procedural level. You'll then learn about potential backward compatible breaks and discover best practices for improving performance. The last chapter of the book gives you insights into PHP async, a revolutionary new way of programming, by providing detailed coverage and examples of asynchronous programming using the Swoole extension and Fibers. By the end of this PHP book, you'll not only have mastered the new features, but you'll also know exactly what to watch out for when migrating older PHP applications to PHP 8.

What you will learn:
* Gain a comprehensive understanding of the new PHP 8 object-oriented features
* Discover new PHP 8 procedural programming enhancements
* Understand improvements in error handling in PHP 8

Avoid traps due to changes in PHP extensions*
* Find out which features have been deprecated and/or removed in PHP 8
* Become well-versed with programming best practices enforced by PHP 8

Who this book is for:
This book is for PHP developers at all levels who have experience in PHP 5 or above. If you're just getting started with PHP, you'll find the code examples useful for learning the language. Developers who have worked for a few months on one or more PHP projects will be able to apply the tips and techniques to the code at hand, while those with many years of PHP experience are sure to appreciate the concise coverage of new PHP 8 features.

Creating a Culture of Reflective Practice - Pete Hall - 2017-08-29
As a school administrator, instructional coach, or teacher leader, you know that reflective teachers are effective teachers. But how can you help teachers become self-reflective practitioners whose thoughtful approach translates into real gains for student achievement? In Creating a
volume to their teacher-oriented book Teach, Reflect, Learn—authors Pete Hall and Alisa Simeral draw on lessons learned from educators across grade levels, content areas, and district demographics to present a definitive guide to developing a culture of reflective practice in your school. Hall and Simeral expand on ideas originally presented in Building Teachers’ Capacity for Success to help you gain a clear understanding of your role and responsibilities—and those of your teachers—within each stage of the Continuum of Self-Reflection. Armed with the book’s real-life examples and research-based tools, you’ll learn how to determine the current location of all stakeholders on the continuum and how teacher-leadership activities, transformational feedback, and strategic coaching can move them forward. The end result? A schoolwide culture that both values reflection and uses it to ensure that teachers—and their students—reach their fullest potential.

Process Discovery Best Practices Using IBM Blueworks Live - Joshua King - 2014-10-29

Business processes and decisions are the backbone of every company, from the small to the Fortune 50; it is how the business runs. It is these processes and decisions that can create competitive advantage, help a company react more quickly to changing trends, or drag them down because the processes do not serve the business and allow agility. The first step in building business agility is to understand how the business works today; What are my processes? What are the decisions we are making and how do we make them? Understanding these processes and decisions can allow a company to improve, streamline, and increase efficiency. Capturing business processes can be a daunting task. Adding to that burden is learning the tool of choice for capturing those processes. Best Practices for Technology-Enhanced Teaching and Learning - Dana S. Dunn - 2011-02-02
The use of technology and teaching techniques derived from technology is currently a burgeoning topic in higher education. Teachers at all levels and types of institutions want to know how these new technologies will affect what happens in and outside of the classroom. Many teachers have already embraced some of these technologies but remain uncertain about their educational efficacy. Other teachers have waited because they are reluctant to try tools or techniques that remain unproven or, as is often the case, lack institutional support. This book is designed to help both groups, so that those with technological expertise can extend their knowledge, while technological novices can purposes. Best Practices for Technology-Enhanced Teaching and Learning brings together expert teacher-scholars who apply and assess technology's impact on traditional, hybrid or blended, or completely on-line courses, relying on technology as a teaching tool for classroom management and interaction (e.g., Blackboard, PowerPoint, student response or "clicker systems," multimedia tools), as well as student-based uses of technology largely independent of instructors (e.g., social networking on popular sites including Facebook and MySpace). Each chapter will address how technological improvements can be connected to assessment initiatives, as is now routinely advocated in psychology and social science education. The book features current scholarship and pedagogy involving innovative technology that impacts on student learning in psychology and related disciplines, focusing also on student reactions to these novel technologies, and proper

necessity, innovation policies at the state level. This text will serve as the standard reference on emerging technologies for undergraduate instructors.

Most of the policy discussion about stimulating innovation has focused on the federal level. This study focuses on the significant activity at the state level, with the goal of improving the public's understanding of key policy strategies and exemplary practices. Based on a series of workshops and conferences that brought together policymakers along with leaders of industry and academia in a select number of states, the study highlights a rich variety of policy initiatives underway at the state and regional level to foster knowledge based growth and employment. Perhaps what distinguishes this effort at the state level is most of all the high degree of pragmatism. Operating out of necessity, innovation policies at the state level often involve taking advantage of existing resources and recombining them in new ways, forging innovative partnerships among universities, industry and government organizations, growing the skill base, and investing in the infrastructure to develop new technologies and new industries. Many of these initiatives are being guided by leaders from the private sector and universities. The objective of Best Practices in State and Regional Innovation Initiatives: Competing in the 21st Century is not to do an empirical review of the inputs and outputs of various state programs. Nor is it to evaluate which programs are superior. Indeed, some of the notable successes, such as the Albany nanotechnology cluster, represent a leap of leadership, investment, and sustained commitment that has had remarkable results in an industry that is actively pursued by many countries.
