How to Develop Web Reports

Gary Walters

Environmental Program Manager

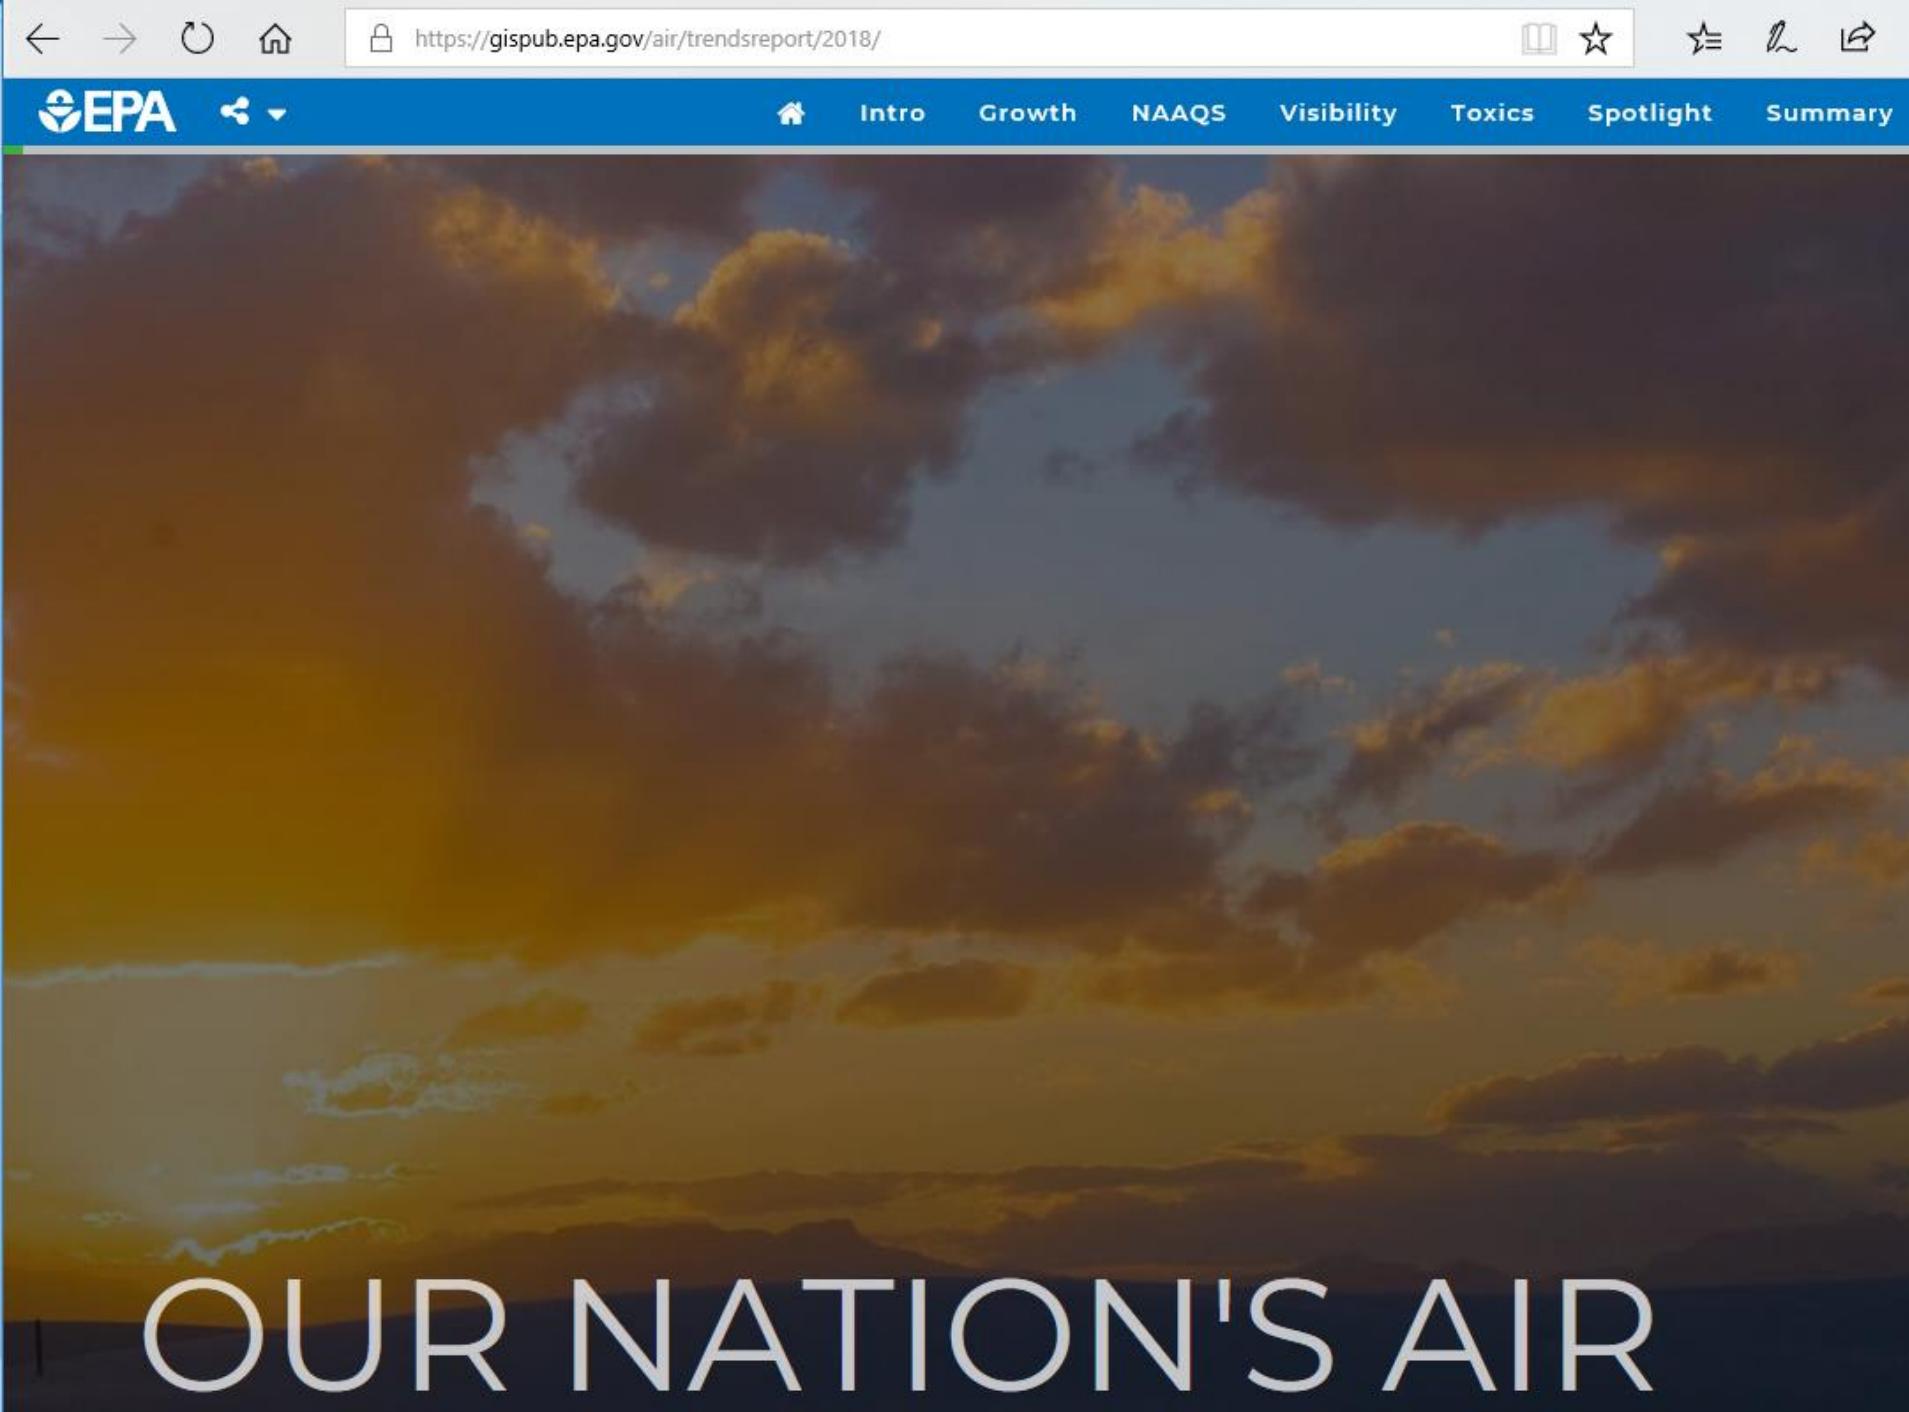

Water Quality Division

Tom Wolf, Governor

Patrick McDonnell, Secretary

EPA Air Quality Trends Report

- EPA developed an interactive web application for the Air Quality Trends
 - EPA publishes an annual air trends report in the form of an interactive web application (<https://gispub.epa.gov/air/trendsreport/2018/>). The report features a suite of visualization tools that allow the user to:
 - Learn about air pollution and how it can affect our health and environment.
 - Compare key air emissions to gross domestic product, vehicle miles traveled, population, and energy consumption back to 1970.
 - Take a closer look at how the number of days with unhealthy air has dropped since 2000 in 35 major US cities.
 - Explore how air quality and emissions have changed through time and space for each of the common air pollutants.
 - Check out air trends where you live.
 - Users can share this content across social media, with access to Facebook, Twitter, Pinterest, and other major social media sites.

OUR NATION'S AIR

OUR NATION'S AIR

<https://gispub.epa.gov/air/trendsreport/2018/>

Interactive and periodically updated

Developed by Arthur Zuco in the EPA Air Quality Assessment Division

GitHUB and open source

The screenshot shows a web browser window with three tabs: '2018 Integrated Report', 'GitHub - USEPA/Air-Tre X', and 'Our Nation's Air 2018'. The central tab displays the GitHub repository for 'USEPA/Air-Trends-Report'. Key statistics shown are 44 commits, 2 branches, 0 releases, and 3 contributors. The 'master' branch is currently selected. A list of commits is provided, with the most recent one being 'a25be72 on Aug 28 2018'. Below the commits, there is a section for the 'README.md' file.

Commit	Message	Date

- Open source so meaning no cost to the user

What's Needed to Develop This Application Infrastructure

1. Microsoft Visual Studio
2. Graphics (Highcharts (link: <https://www.highcharts.com/>) , Plotly (link: <https://plot.ly/>) , D3 (link: <https://d3js.org/>))
3. ArcGIS or other mapping products if mapping is included
4. Photo and video editing software
5. External Facing Web Server

Personnel

1. GIS
2. Business/Program
3. Communications
4. Education
5. Administration (Policy, Legal, etc.)
6. IT (web services)

Adding features and function

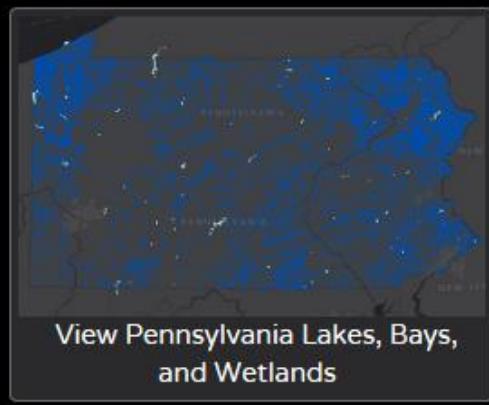

Adding interactive maps:

PENNSYLVANIA WATER RESOURCES

Pennsylvania is a water rich state with approximately 85,000 miles of streams and rivers connecting over 700,000 acres of lakes, bays, and wetlands. Protection of these waters and the groundwater below is a challenging, but vital mission.

View Pennsylvania Streams and Rivers

View Pennsylvania Lakes, Bays, and Wetlands

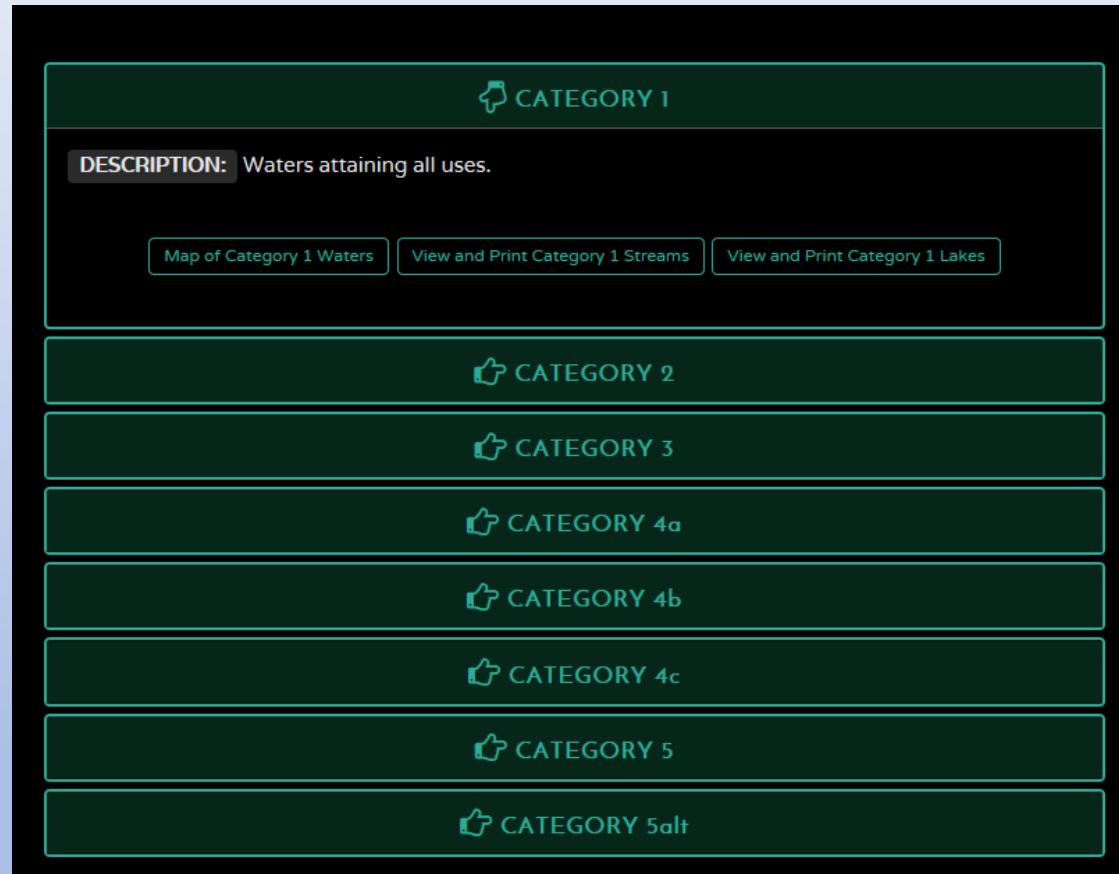

An image (.png) of the web mapping application is created. This image is then placed in the application with a link to a web mapping application url.

This coding links the maps you see to the left

```
<a href="https://padep-  
1.maps.arcgis.com/apps/View/index.html?appid=9bd2  
f843c4a44bb1a8ae0d024c66675f" target="_blank">  
      
</a>
```

The layers and attributes for the maps are provided by the program and other data sources. The interactive maps for the PA 2018 IR are ArcGIS tools and published as ArcGIS Rest Map Service. Data layers and attributes reside in PA DEP's enterprise geodatabase.

Adding features and function

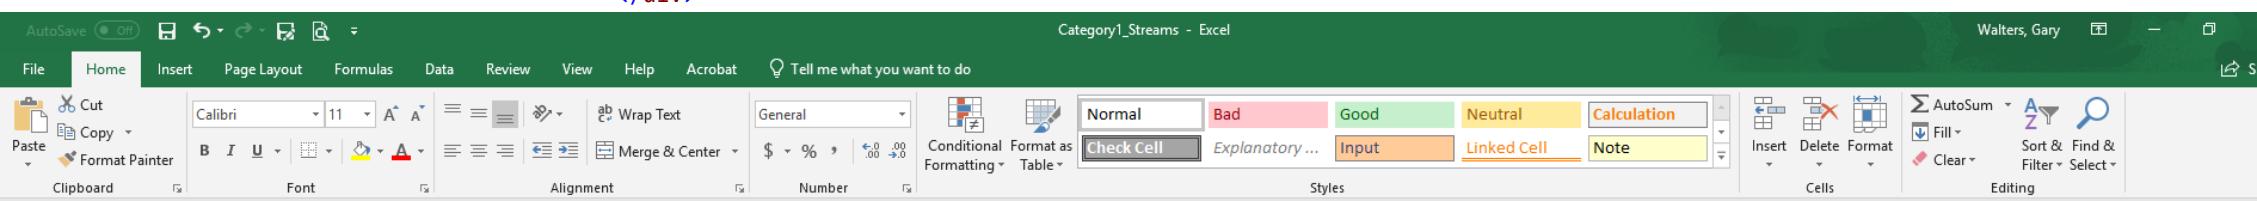

Adding accordion menus:

It was necessary to provide all data in a variety of formats for printing. This includes data tables.

The Bootstrap accordion holds a set of panes whose titles are all visible, but only one pane's content is visible at a time. Clicking on a pane title slides the currently displayed one away and displays the clicked pane content. The first pane is the opened by default. In the Integrated Report, buttons were inserted the accordion content that are links to web mapping applications and Excel spreadsheets. When the buttons are clicked, the web mapping application will open in a new window or the Excel spreadsheet can be displayed or downloaded to the user's PC. The code on the next slide was used to program the CATEGORY 1 panel.

Code for Accordion Menu

```
•     <div class="panel panel-info">
•       <div class="panel-heading">
•         <center>
•           <h4 class="panel-title">
•             <a class="accordion-toggle" data-toggle="collapse" data-parent="#accordion" href="#cat1">
•               <i class="icon icon-hand-o-down icon-lg" aria-hidden="true"></i>
•             CATEGORY 1
•           </a>
•         </h4>
•       </center>
•     </div>
•     <div id="cat1" class="panel-collapse collapse in">
•       <div class="panel-body">
•         <span class="label label-custom">DESCRIPTION:</span>
•         Waters attaining all uses.
•         <br><br>
•       </div>
•       <center>
•         <p> //Buttons in panel
•           <a href="https://padep-1.maps.arcgis.com/apps/View/index.html?appid=801e1ba978c24f4487e0c1a7aa23b972" class="btn-sm hvr-sweep-to-right" target="_blank" title="Map of Category 1 Waters">Map of Category 1 Waters</a>

Adding features and function

Interactive graphics were used throughout the report: Highcharts were used to aid in the visual presentation of the data.

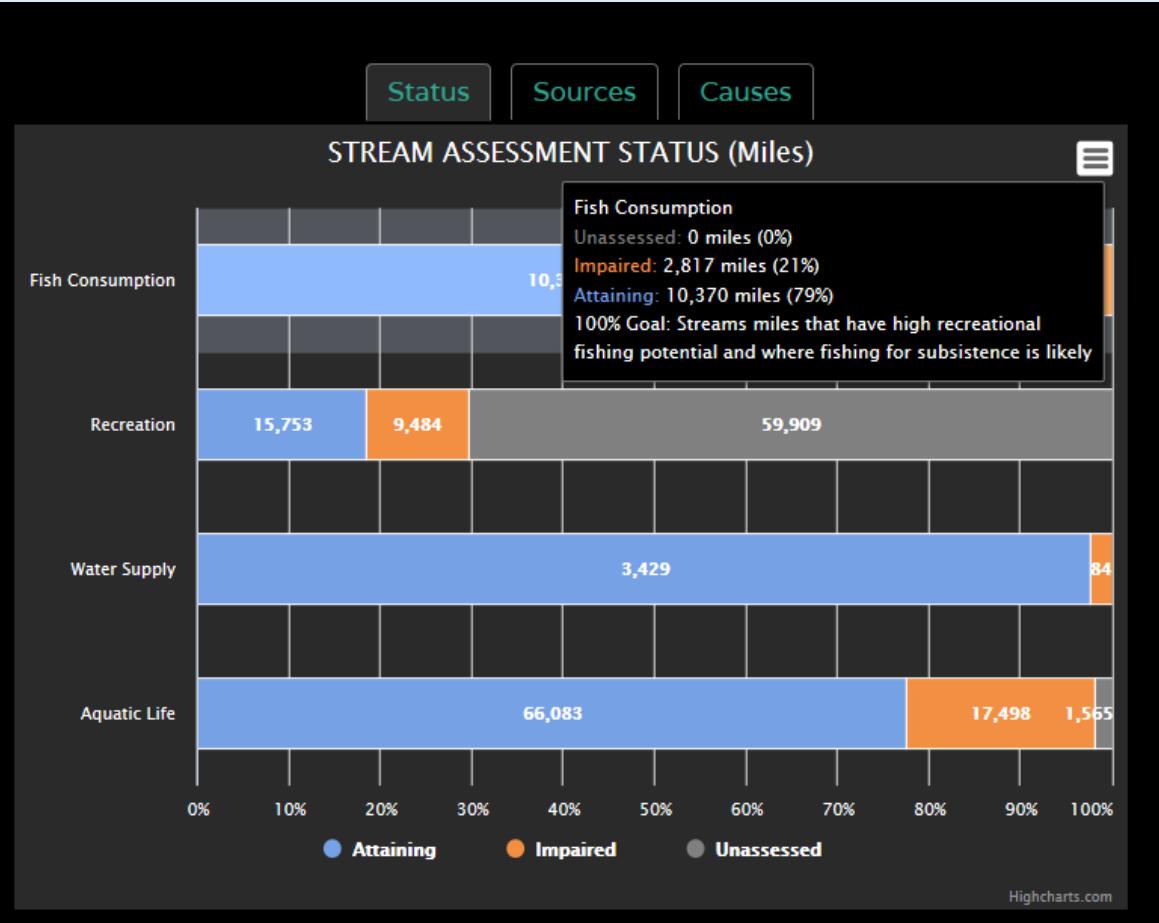

Functionality seen is integral to Highcharts. What you see at the left is a tab container that displays the HTML page containing the high chart.

The Highcharts export data module enables exporting the chart data to CSV or XLS table formats. The XLS converter is limited and only creates a HTML string that is passed for download, which works but creates a warning before opening.

The link for export module is

<https://www.highcharts.com/docs/export-module/export-module-overview>

The next five slides contain the programming code for this chart.

Printing and Exporting Formats

When you click on the  icon you will see the menu for printing the chart and for exporting the image or downloading the data behind the graphic.

Adding features and function

Interactive graphics were used throughout the report: Maps and dropdown menus for parameters were used graphically provide data.

This is accomplished through use of ArcGIS mapping and javascript programming in the report. When the user selects the parameter of interest, the javascript code loads the web mapping application into the container displaying the map the user has selected.

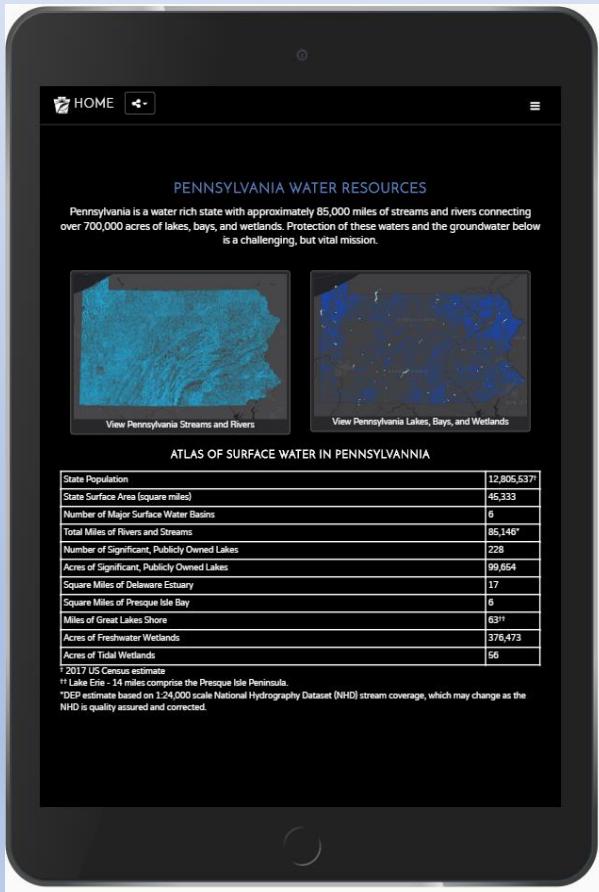

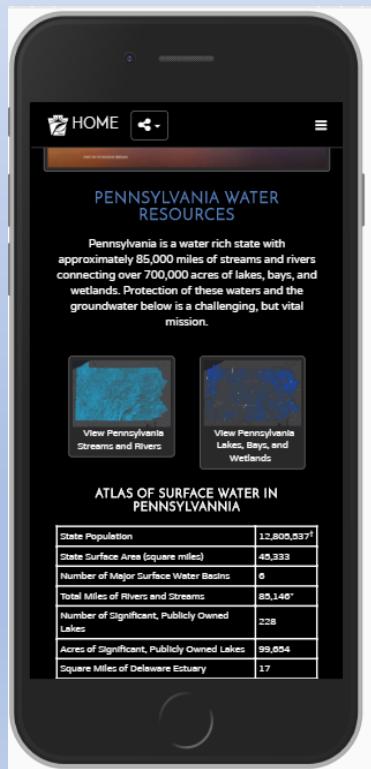

The next slide contains the programming code.

Code for Ground Water Data Mapping

```

Compatibility with Other Devices

One of the features of this programming code is the versatility to be displayed on a variety of devices. Below are examples of how the report appears on phones, tablets and laptops.

A laptop screen showing the desktop version of the Pennsylvania Water Resources website. The layout is identical to the tablet version, featuring a top navigation bar and a sidebar on the left. The main content area includes a title 'PENNSYLVANIA WATER RESOURCES' and a detailed description of the state's water resources. It features two large maps and a table of data at the bottom. The right side of the screen displays a sidebar titled 'ATLAS OF SURFACE WATER IN PENNSYLVANIA' with a table of data.

State Population	12,805,537 [†]
State Surface Area (square miles)	45,333
Number of Major Surface Water Basins	6
Total Miles of Rivers and Streams	85,146 [*]
Number of Significant, Publicly Owned Lakes	228
Acres of Significant, Publicly Owned Lakes	99,654
Square Miles of Delaware Estuary	17
Square Miles of Presque Isle Bay	6
Miles of Great Lakes Shore	63 ^{††}
Acres of Freshwater Wetlands	376,473
Acres of Tidal Wetlands	56

[†] 2017 US Census estimate

^{††} Lake Erie - 14 miles comprise the Presque Isle Peninsula.

^{*}DEP estimate based on 1:24,000 scale National Hydrography Dataset (NHD) stream coverage, which may change as the NHD is quality assured and corrected.

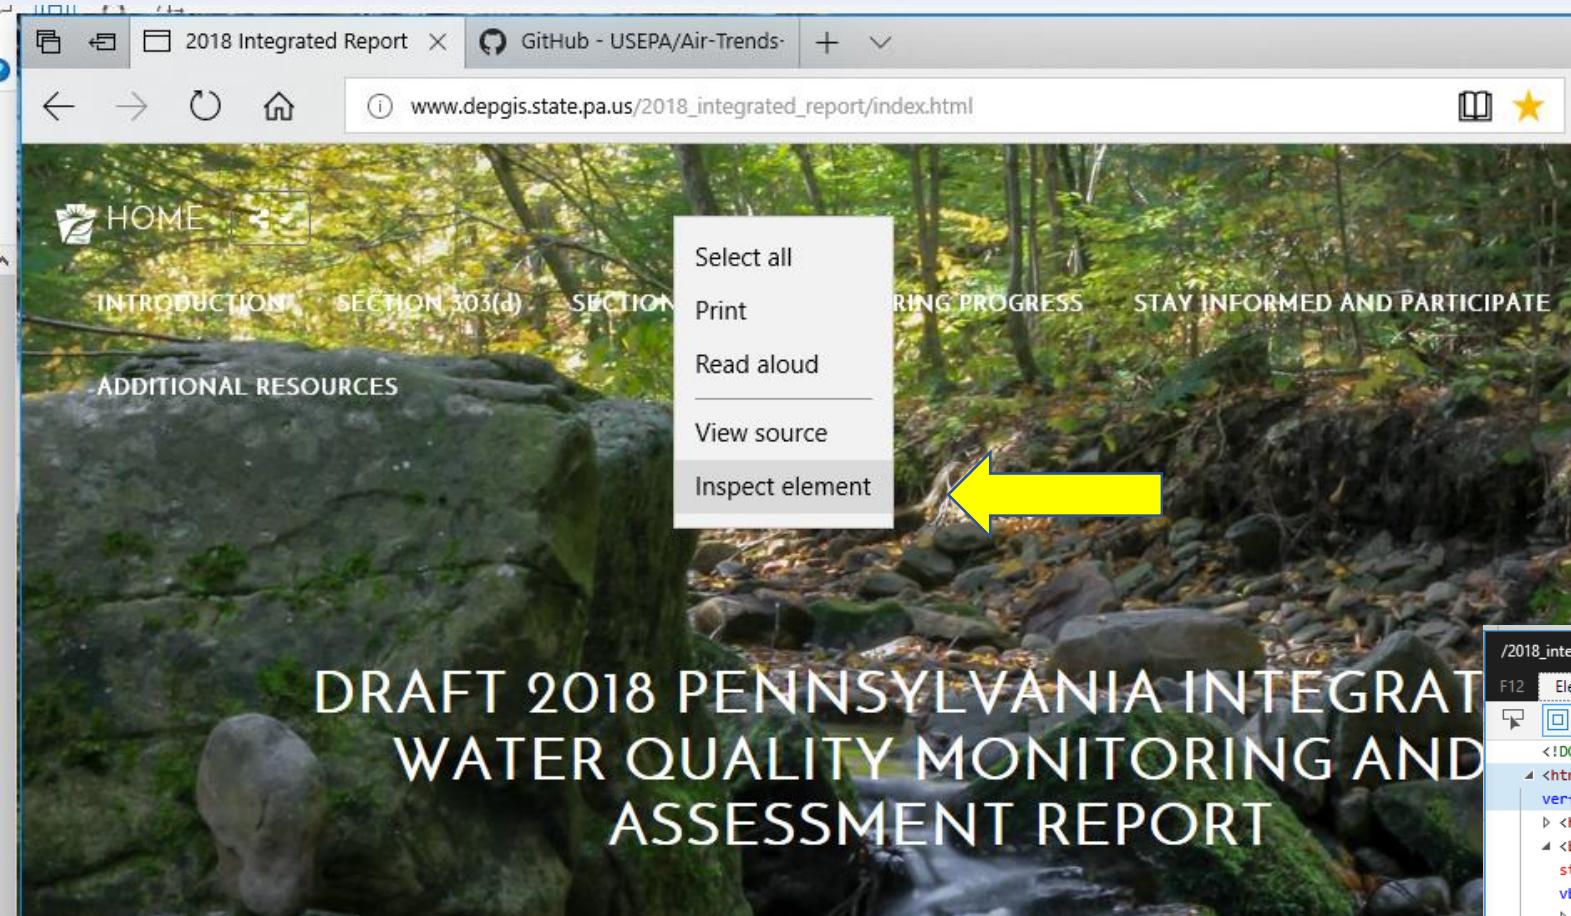

Bootstrap Tool

- Bootstrap is an open source toolkit for developing responsive, mobile-first websites with HTML, CSS, and JavaScript. Bootstrap is free to download and use.
- It provides basic style definitions for all HTML elements. In addition, developers can take advantage of CSS classes defined in Bootstrap to customize the appearance of their content.
- Bootstrap comes with several jQuery plugins. Each Bootstrap component consists of HTML structure, CSS declarations, and sometimes JavaScript code.
- The basic layout component is called a “Container”
- Every element on the page is placed on the container
- Using the Bootstrap Fluid Container, Bootstrap will figure out how wide the screen is and response by resizing your HTML elements.
- With this responsive design, there is no need to design a mobile version of your website.
- You can add Bootstrap to any app by adding the following code at the top of your HTML.
 - `<!-- Bootstrap Core CSS -->`
 - `<link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/twitter-bootstrap/3.4.0/css/bootstrap.min.css" integrity="sha256-H0KfTigpUV+0/5tn2HXC0CPwhhDhWgSawJdnFd0CGCo=" crossorigin="anonymous" />`

Tools to Examine Code

Place cursor on element and right click. Select Inspect element from popup.

A screenshot of the Microsoft Edge F12 Developer Tools. The "Elements" tab is selected. The left pane shows the DOM tree with nodes like <!DOCTYPE html>, <html>, <body>, <nav>, <div>, and <a>. The right pane shows the "Styles" tab, which displays inline styles and external CSS files like "etrends.min.css" and "scaffolding.less".

Section 303(d) List and 305(b) Report

The screenshot shows a browser window with developer tools open. The left side displays the DOM tree, which includes the entire HTML structure of the page. The right side shows the 'Styles' panel, which lists various CSS files and their properties. The 'normalize.less' file is currently active, showing declarations like font-size: 10px; and font-family: sans-serif;. The 'vendor-prefixes.less' file is also visible at the bottom.

```
<!DOCTYPE html>
<html class="fp-enabled" lang="en" style="height: initial; overflow: visible;">
  <head></head>
  <body class="fp-viewing-home fp-responsive" id="page-top" style="height: initial; overflow: visible;" data-target=".navbar-fixed-top" data-spy="scroll">
    <!-- Navigation -->
    <div class="se-pre-con" style="display: none;"></div>
    <!-- Collect the nav links, forms, and other content for toggling -->
    <div class="collapse navbar-collapse navbar-right navbar-main-collapse"></div>
  </body>
</html>
```
