

# ATTAINS: A Training on Entering Actions

Wendy Reid  
Selena Medrano  
June 2, 2022

# Actions

Actions are reports or plans completed with the goal of attaining or maintaining water quality.

Common Actions include:

- TMDLs
- Protection Approaches
- Restoration Approaches

# Access Levels

## State

- Data Entry or Administrator for Actions
- State can edit the Draft status Action managed by State
- State submits the Action to EPA

## EPA

- Administrator or Reviewer for Actions
- EPA can edit Draft, Submitted (aka “State Final Action”), or Modify Status
- EPA can return a state-submitted Action
- For TMDLs: Once Final (“EPA Final Action”), only EPA Reviewer can edit an Action by putting it in “Modify” status

# Action Batch Upload

# User Interface vs. Batch Upload: When to Use Each Option

What You Want to Do	Recommended Option
<b>Add one new Action or edit a couple of things on an existing Action</b>	Use the forms in the User Interface. The User Interface walks you through the data elements that are needed and gives you faster feedback as you make the edits
<b>Add New Actions</b> (lots of data for a single Action or for multiple new Actions)	Use the appropriate Batch Upload template (TMDL Action or Non-TMDL Action). The Batch Upload Template works best when you are entering lots of similar data from scratch
<b>Edit Existing Actions</b> (generally if you need to edit more than a few things on an Existing Action or need to edit multiple Existing Actions at one time)	Filter the actions module for the Actions you want to edit. Export Filtered Actions. (It is best to filter for one specific type of Action at a time). Save a copy of the export files as a backup. Then <b>edit the export files</b> and re-upload those.  <b>Do not copy and paste</b> the existing data to the Batch Upload template because you may mis-copy data. Just use the Batch Upload Template as a reference for the required fields and the allowed domain values.

# Important Notes

- The Export Actions functionality combines TMDLs and Non-TMDLs in the same files. Some columns and files apply to TMDLs that do not apply to Non-TMDL Actions. The export will also include Actions from all Statuses.
- For State/Territory/Tribal Users: Actions Batch Upload can only be used to upload Actions in “Draft” Status.
- For EPA Users: Actions Batch Upload can be used to Upload Actions in “Draft”, “Submitted” (a.k.a., “State Final Action”), or “Modify” status. However, Batch Upload **cannot** be used to change the status of an Action.
- **Assessment Unit IDs must already exist** for the Organization before they can be used in an Actions Batch Upload Template.

# TMDL vs Non-TMDL Template

TMDLs have different requirements from Non-TMDLs (4B, Alternative, Protection Approach Actions)

Tab or File Name	TMDL Template	Non-TMDL Template
<b>Actions</b>	✓	✓
<b>Pollutant</b>	✓	
<b>Load Allocation</b>	✓	
<b>Permit</b>	✓	
<b>Parameter</b>	✓	✓
<b>Source</b>	✓	✓

# Action Batch Upload Templates

# Batch Upload: Update

- Appends data to existing Action ID
- Does not delete entire rows of data within the Action
- Will overwrite corresponding data fields for previously populated data
  - If an Optional field was previously populated in the file for that Action, then it needs to be included in the upload. Otherwise, it will be overwritten with blanks.

Existing Data	Upload file Using UPDATE	Results in ATTAINS
TMDL_01 has 1 Pollutant: <ul style="list-style-type: none"><li>• Fecal Coliform</li></ul>	TMDL_01 has 2 Pollutants: <ul style="list-style-type: none"><li>• Total Suspended Solids (TSS)</li><li>• Escherichia Coli (E. Coli)</li></ul>	TMDL_01 ends up with 3 Pollutants <ul style="list-style-type: none"><li>• Fecal Coliform</li><li>• Total Suspended Solids (TSS)</li><li>• Escherichia Coli (E. Coli)</li></ul>

# Batch Upload: Replace

- Deletes entire rows/tabs of data from existing Action ID for any Action ID in the files
- Replaces that data with ONLY the data in the upload files
  - All required files and previously populated optional files must be uploaded simultaneously, or it will delete the data from ATTAINS for missing files

Existing Data	Upload file Using REPLACE	Results in ATTAINS
TMDL_01 has 1 Pollutant: <ul style="list-style-type: none"><li>• Fecal Coliform</li></ul>	TMDL_01 has 2 Pollutants: <ul style="list-style-type: none"><li>• Total Suspended Solids (TSS)</li><li>• Escherichia Coli (E. Coli)</li></ul>	TMDL_01 ends up with 2 Pollutants <ul style="list-style-type: none"><li>• Total Suspended Solids (TSS)</li><li>• Escherichia Coli (E. Coli)</li><li>• (Fecal Coliform is deleted because it was not in upload file.)</li></ul>

# Batch Upload: Warnings vs. Errors

- Warnings

- Will allow you to proceed with upload
- Must be addressed before Action is Submitted or Finalized

- Errors

- Must be fixed before upload can continue
